

Healthy Start Data Highlight: Infant Mortality by Minneapolis Community

Infant mortality by community

Ten-year rate of infant deaths, by community, Minneapolis, 2006-2015

What does this tell us?

- Neighborhoods with the highest rates of infant mortality in Minneapolis
- Neighborhoods with rates above the Healthy People 2020 target
- Rates per 1000 births

What doesn't this tell us?

- Poverty rate in neighborhoods
- Racial composition of neighborhoods
- Cause of infant deaths

** Suppressed: Rate is not stable, because it is based on fewer than 20 deaths.

HP 2020: National Healthy People 2020 objective, available online at: <https://www.healthypeople.gov/>

Number and rate of infant deaths, by community, Minneapolis

2006-2015

Healthy People 2020 objective: 6.0 infant deaths per 1,000 live births

^[1] IMR: Infant mortality rate, defined as the number of infant deaths per 1,000 live births

^[2] Burden rank: Number-based rank (1-5) during the ten-year period

^[3] Disparity rank: Rate-based rank (1-5) during the ten-year period

** Suppressed: Rate is not stable, because it is based on fewer than 20 deaths.
