

MMWR: Detection of *Paraburkholderia* in Clinical Specimens Associated with Use of Nonsterile Ultrasound Gel for Percutaneous Procedures — United States, Canada, and Israel, May 2023–April 2025

SUPPLEMENTARY TABLE. *Paraburkholderia* species isolates* from clinical specimens identified in an investigation of a cluster of positive cultures — Minnesota, North Carolina, North Dakota, Canada, and Israel — 2024-2025

State or country where cultures were collected	Period when specimens were identified [†]	No. of isolates	No. of isolates available for WGS
Initial identification			
Minnesota	Aug 2024	7	7
Recent look-back results from one Minnesota lab			
Minnesota	Sep 2024	8	0
Multistate look-back to Sept 2023			
Minnesota	Oct. 2024	4	0
North Dakota	Nov. 2024	1	1
11 other states	Oct. 2024	25	0
Ongoing investigation			
Minnesota	Oct-Dec 2024	5	5
North Carolina	Oct 2024	21 (19 [§] sent to Minnesota)	16 [¶]
Israel*	Jan-April 2025	10	10
Canada	Jan-Feb 2025	4	4
TOTAL	—	64**	43

* All isolates were obtained from blood cultures, with the exception of three from Israel, which were recovered from ascitic fluid cultured in blood culture bottles

[†] References both retrospective and prospective identification of positive specimens during the investigation

[§] Included among the 25 from 11 other states, October 2024

[¶] Including two isolates from one patient

**Does not include the 21 sent from North Carolina, which are included among the 25 sent from other states
