

Neonatal Sepsis

Neonatal sepsis is now reportable in Minnesota!

Help us to determine:

- The incidence and causes of neonatal sepsis
- Antimicrobial susceptibility patterns of organisms causing neonatal sepsis
- The impact of intrapartum antibiotic use

Please report all bacteria, excluding coagulase-negative *Staphylococcus*, isolated from a sterile site in infants less than 7 days of age

Please submit isolates to the MDH Public Health Laboratory

To report a case of neonatal sepsis, please complete the MDH Disease Report Card (blue card) or call (651) 201-5414
