5. Data mappings for the following data section has been changed.

Data Element	Data Section
Trauma Team Activated	TR17.21

Notes

- When importing data, review the System Validation Messages in the report generated upon completion of the import. It will indicate missing required fields and can be used to ensure that the required data elements are being collected and reported.
- The inclusion criteria on the following pages define the minimum reportable cases. However, MNTrauma will accept any record reported. Registrars need not be certain that a case satisfies the inclusion criteria before reporting it, nor must registrars filter cases before importing files. Any case may be reported.
- Trauma registry, traumatic brain injury (TBI) and spinal cord injury (SCI) cases that satisfy the inclusion criteria must be reported within 60 days of patients' discharge. This is particularly important in the case of TBI and SCI cases because the information reported is used to connect patients with resources in their communities to prevent or address sequelae of their injuries such as mental illness and chemical dependency.
- When importing data from other sources, such as TraumaBase, ensure that the import file does not contain these characters within a text field:
 - Greater than or less than symbols: (< >)
 - Ampersand: (&)
 - Apostrophe or single quotation mark: (')

These characters are used to define specific functions in a data file. When they appear in a text field within an XML document, the system mistakes them for part of that function command.

Minnesota Trauma Registry Inclusion Criteria

*Admitted or transferred for trauma care excludes patients who are admitted or transferred:

- For the care of a medical or mental health condition
- For palliative care
- For pain control
- For in-patient physical or occupational therapy
- While awaiting evaluation and placement for a living situation

Traumatic Brain/Spinal Cord Injury Registry Inclusion Criteria

Cases of traumatic brain injury and spinal cord injury must be reported to the Minnesota Department of Health if the patient receives one of the following ICD-10-CM codes either as a **principal or secondary** diagnosis, for an initial encounter **ONLY** (7th digit=A, B or C):

TBI F07.81 - post concussion syndrome

G93.1 - anoxic brain damage (when T75.1, T71.1xx, T71.2xx or T71.9 **also** coded)

S02.0 – fracture of vault of skull

S02.1xx - fracture of base of skull

S02.91 – unspecified fracture of skull

S04.0xx - injury to optic nerve and pathways

S06.xxx – Intracranial Injury

S07.1 – crushing injury of skull

T74.4 - shaken infant syndrome

SCI S14.0 – S14.1xx – Injuries of cervical spinal cord

S24.0 – S24.1xx – Injuries of thoracic spinal cord

S34.0 – S34.1xx – Injuries of lumbar/sacral spinal cord

AND

the injury occurred to a Minnesota resident, **or**the injury occurred within Minnesota

AND

the patient: was admitted as an inpatient to an acute care hospital, **or** died (or declared DOA) in the emergency department prior to admission, **or** was transferred from the emergency department to an out-of-state hospital.

Do **not** report patients:

- seen only in the emergency room and then discharged; or
- admitted only as outpatients for observation, and then discharged; or admitted directly to long-term-care or rehabilitation facilities.

REGISTRY NUMBER

The number that is unique to the trauma registry record.

Notes: The Registry Number is automatically assigned when the record is created in MNTrauma. If records are imported, the number is assigned at the time of import.

Values

Field ID: TR5.12

Category: CASE DESCRIPTION

Required: (1=required, 0=optional)

Trauma Registry: 1

ICD 10 LOCATION

The ICD-10-CM Place of Occurrence external cause code used to describe the place/site/location of the injury event

Notes: Multiple Cause Coding Hierarchy: If two or more events cause separate injuries, the reported external cause code will be selected based on the following hierarchy:

- 1. External cause codes for child and adult abuse take priority over all other external cause codes.
- 2. External cause codes for terrorism events take priority over all other external cause codes except child and adult abuse.
- 3. External cause codes for cataclysmic events take priority over all other external cause codes except child and adult abuse, and terrorism.
- 4. External cause codes for transport accidents take priority over all other external cause codes except cataclysmic events, and child and adult abuse, and terrorism.
- 5. The first listed external cause code should correspond to the cause of the most serious diagnosis due to an assault, accident or self-harm, following the order of hierarchy listed above.

Trauma Registry: 0

ICD 10 INJURY

ICD-10-CM external cause codes used to describe the mechanisms (or external factors) that caused the injury event

Notes: List the code used to describe the principal cause first. Additional codes used to describe the incident should be listed beneath the code used to describe the principal cause.

Ensure that TBI/SCI cases also include a Y99 (External Cause Status) code.

Values

Field ID: TR200.3

Category: CASE DESCRIPTION

Required: (1=required, 0=optional)

Trauma Registry: 1

INJURY DESCRIPTION

A brief written description of the injury causes to provide additional clarity or to provide information when the cause codes are not known to the abstractor.

Notes:

Values

Field ID: TR20.12

Category: CASE DESCRIPTION

Required: (1=required, 0=optional)

EMS GCS MANUAL

The lowest Glasgow Coma Scale score at the scene of the injury or en route to the hospital before intubation, sedation or paralyzation.

Notes: Typically obtained from the ambulance run sheet.

Values

Field ID: TR18.64

Category: PRE-HOSPITAL

Required: (1=required, 0=optional)

Trauma Registry: 0

EMS AVPU

The lowest AVPU score recorded in by EMS before intubation, sedation or paralyzation.

Notes: If the AVPU is not explicitly recorded, but there is documentation related to their level of consciousness such as "AAOx3," "awake alert and oriented," or "patient with normal mental status," interpret this as "A" if there is no other contradicting documentation.

Values

MAPPED CODE	VALUE NAME	VALUE DEFINITION
1	Alert	Patient is awake and alert.
2	Verbal Stimuli	Responsive to verbal stimuli: patient not awake but easy to arouse by verbal stimuli. Can obey some simple commands, speak comprehensively, although some disorientation may be present.
3	Painful Stimuli	Responsive to painful stimuli: patient difficult to arouse (e.g., requires noxious stimuli), cannot obey simple commands; speech inappropriate or incomprehensible.
4	Unresponsive	Unresponsive: patient does not open eyes, obey commands or utter words.

TRAUMA TEAM ACTIVATED

Indicates level of trauma team activation.

Notes: Report the level actually activated regardless of the patient's condition.

If the patient met activation criteria but the team was not activated, report "Not Activated."

For hospitals with a single-tier trauma activation policy (i.e., single set of activation criteria), select "Tier 1." For hospitals using a multi-tier trauma activation policy, indicate which tier was activated.

Tier-three activations need not be reported.

Values

MAPPED CODE	VALUE NAME	VALUE DEFINITION
1	Not Activated	The trauma team was not activated.
2	Tier 1	Trauma team activated with the highest level of resources available
3	Tier 2	Trauma team activated with less than the highest level of resources available

ED DISPOSITION

The disposition of the patient at the time of discharge from the ED

Notes: Report observation and telemetry patients as "Floor bed."

Values

MAPPED CODE	VALUE NAME	VALUE DEFINITION
11	Transferred to another hospital	Transferred to a short-term, acute care hospital for inpatient care
10	Left against medical advice	Left against medical advice, left without being seen, eloped or discontinued care.
9	Home without services	Discharged to home with no home services. Includes discharge to foster home or assisted living facility, correctional facility, detoxification center or to the custody of law enforcement. It also includes patients discharged to a skilled nursing facility if the patient was a resident of the SNF prior to the injury and is returning to the same level of care.
8	Intensive Care Unit	Admitted to the intensive care unit
7	Operating room	Patient went directly to the operating room upon discharge from the emergency department.
6	Other	Discharged from the emergency department to another venue not otherwise specified.
5	Died	Patient died in the emergency department. Includes patients who arrived with CPR in progress, but excludes patients who died prehospital and for whom resuscitation was not attempted in the emergency department.
4	Home with services	Discharged to home under care of organized home health services that were not being utilized prior to the injury.

HOSPITAL GLASGOW EYE

First recorded Glasgow Coma Score (Eye) in the ED/hospital within 30 minutes of ED/hospital arrival

Notes: The first recorded hospital vitals need not be from the same assessment.

If no numeric GCS score is documented but written documentation closely (or directly) relates to verbiage describing a specific level of functioning within the GCS scale, the appropriate numeric score may be listed. (e.g. If the chart indicates that the patient's pupils are PERRL, an Eye GCS of 4 may be recorded as long as there is no other contradictory documentation.

Values

MAPPED CODE	VALUE NAME
1	1 No eye movement when assessed
2	2 Opens eyes in response to painful stimulation
3	3 Opens eyes in response to verbal stimulation
4	4 Opens eyes spontaneously

HOSPITAL GCS QUALIFIER

Documentation of factors potentially or actually affecting this record of the GCS.

Notes: Select up to three.

Values

MAPPED CODE	VALUE NAME	VALUE DEFINITION
4	Valid GCS	The reported GCS is reliable: The patient was not sedated, not intubated, and did not have an obstruction to the eye at the time the GCS was assessed.
1	Chemically Sedated or Paralyzed	The patient was chemically paralyzed or sedated at the time the GCS was assessed.
2	Obstruction to the Eye	There was an obstruction to one or both eyes that prevented assessment of the 'eye opening' component of the GCS at the time the GCS was assessed.
3	Intubated	The patient was intubated at the time the GCS was assessed.

DRUG SCREEN

The illicit or prescription drugs used by the patient before injury as determined from a toxicological screen or patient or witness report

Notes: Select all that apply.

Report substances present in drug screens performed within 24 hours of admission.

Do not report theraputic drugs administered as part of the patient's clinical therapy after the injury.

Values

MAPPED CODE	VALUE NAME	VALUE DEFINITION
1	AMP (Amphetamine)	The drug screen was positive for an amphetamine, or the patient or reliable witness reported that the patient used an amphetamine prior to the injury.
2	BAR (Barbiturate)	The drug screen was positive for a barbiturate, or the patient or reliable witness reported that the patient used a barbiturate prior to the injury.
3	BZO (Benzodiazepines)	The drug screen was positive for a benzodiazepine, or the patient or reliable witness reported that the patient used a benzodiazepine prior to the injury.
4	COC (Cocaine)	The drug screen was positive for cocaine, or the patient or reliable witness reported that the patient used cocaine prior to the injury.
5	mAMP (Methamphetamine)	The drug screen was positive for methamphetamine, or the patient or reliable witness reported that the patient used methamphetamine prior to the injury.
6	MDMA (Ecstasy)	The drug screen was positive for methylenedioxy- methamphetamine, or the patient or reliable witness reported that the patient used methylenedioxy-methamphetamine prior to the injury.
7	MTD (Methadone)	The drug screen was positive for methadone, or the patient or reliable witness reported that the patient used methadone prior to the injury.
8	OPI (Opioid)	The drug screen was positive for an opioid, or the patient or reliable witness reported that the patient used an opioid prior to the injury.
13	Other	The drug screen was positive for another drug not otherwise specified, or the patient or reliable witness reported that the patient used another drug not otherwise specified prior to the injury.
9	OXY (Oxycodone)	The drug screen was positive for oxycodone, or the patient or reliable witness reported that the patient used oxycodone prior to the injury.
10	PCP (Phencyclidine)	The drug screen was positive for phencyclidine, or the patient or reliable witness reported that the patient used phencyclidine prior to the injury.

MAPPED CODE	VALUE NAME	VALUE DEFINITION
11	TCA (Tricyclic Antidepressant)	The drug screen was positive for a tricyclic antidepressant, or the patient or reliable witness reported that the patient used a tricyclic antidepressant prior to the injury.
12	THC (Cannabinoid)	The drug screen was positive for a cannaboid, or the patient or reliable witness reported that the patient used a cannaboid prior to the injury.
14	None	The drug screen was performed but the result was negative.

HOSPITAL DISCHARGE DISPOSITION

The disposition of the patient at the time of discharge from the hospital.

Notes: This is often determined from the discharge summary in the medical record. Discharge to any non-medical facility other than those listed should be coded as "Home with no home services". Discharge to any medical facility other than those listed should be reported as "Other."

Values

MAPPED CODE	VALUE NAME	VALUE DEFINITION
1	Acute care hospital	Transferred to a short-term, acute care hospital for inpatient care
3	Home with home health services	Discharged to home under care of organized home health services that were not being utilized prior to the injury.
4	Left AMA or discontinued care	Left against medical advice, eloped or discontinued care.
5	Died	Patient died.
6	Home with no home services	Discharged to home with no home health services. Includes discharge to foster home or assisted living facility, correctional facility, detoxification center or to the custody of law enforcement. It also includes patients discharged to a skilled nursing facility if the patient was a resident of the SNF prior to the injury and is returning to the same level of care.
7	Skilled Nursing Facility	Discharged to a skilled nursing facility when the patient was not a resident of the SNF prior to the injury, or was a resident of the SNF prior to the injury but is returning to a higher level of care.
8	Hospice care	Discharged to hospice care.
9	Rehabilitation or long-term facility	Transferred to an inpatient rehab or long-term care facility. Includes cases in which the patient is being discharged to a skilled nursing facility specifically for the rehabilitation services provided by that facility.

TBI OUTCOME

The functional outcome of traumatic brain injury as assessed by the Glasgow Outcome Scale at the time of discharge from the hospital. Select only one.

Notes: If the discharge summary does not clearly state the functional neurologic outcome, coding of this variable may require a review of the medical record by a person knowledgeable in clinical descriptions. If the patient died and did not have a traumatic brain injury then "Not Applicable" should be indicated.

Values

MAPPED CODE	VALUE NAME	VALUE DEFINITION
1	Good Recovery	Conscious, alert, able to work, attend school, and lead a normal life. Independent with respect to activities of daily living. May have minor neurological or psychological deficits (mild dysphasia, non-incapacitating hemi-paresis, or minor cranial nerve abnormalities).
2	Mild Disability	Conscious and able to interact; minor neurological disease that is controlled and does not interfere with daily functioning (seizure disorder). Able to work or attend school in a sheltered setting.
3	Moderate Disability	Conscious Neurological disease that is not controlled and severely limits activities (hemiplegia, seizures, ataxia, dysphasia, permanent memory or mental changes). Able to work or attend school part-time in a controlled setting.
4	Severe Disability	Conscious and at least somewhat responsive, but disabled and dependent for daily support (beyond age/development appropriate care). Is in an institution or at home with exceptional family effort. At least limited cognition. Includes a wide range of cerebral abnormalities from ambulatory with severe memory disturbance or dementia precluding independent existence to paralytic and able to communicate only with eyes, as in the locked-in syndrome.
5	Persisting Coma	Unconscious and functioning involuntarily. Unaware of surroundings, no cognition. No verbal or psychological interaction with the environment.
6	Death	Certified brain dead or dead by traditional criteria.
-45	Not Known/Not Recorded	
-25	Not Applicable	Not a TBI case.

SCI OUTCOME

Describes the extent of the spinal cord lesion at the time of discharge from the hospital. Select only one.

Notes: This is a modification of the American Spinal Injury Association's Impairment Scale (ASIA). If the patient died and did not have a spinal cord injury then "Not Applicable" should be indicated.

Values

MAPPED CODE	VALUE NAME	VALUE DEFINITION
1	Normal	Refers to the full return of all motor, sensory, and autonomic function; minimal reflex abnormalities alone may persist (ASIA Class E) incomplete-functional: refers to a lesion that leaves functionally useful voluntary motor activity below the neurological level of injury; i.e., most key muscle groups in the affected segments have sufficient strength to perform against gravity (ASIA Class D).
2	Incomplete, Functional	Refers to a lesion that leaves any preserved sensory or voluntary motor function below the neurological level of the injury including sacral segments, and with some useful preservation of motor function below this level; i. e., most key muscle groups in the affected segments are strong enough to perform against gravity (ASIA Class C).
3	Incomplete, Nonfunctional	Refers to a lesion that leaves any preserved sensory or voluntary motor function below the neurological level of the injury including sacral segments, but without useful preservation of motor function below this level; i.e., most key muscle groups in the affected segments are too weak to perform against gravity (ASIA Class B).
4	Complete	Refers to a lesion that leaves no preserved motor or sensory function in the sacral segments S4-S5 (ASIA Class A)
5	Death	
-45	Not Known/Not Recorded	
-25	Not Applicable	Not an SCI case.

OVERALL PERFORMANCE

The Glasgow-Pittsburgh overall performance categories reflect cerebral and non-cerebral status and evaluate actual overall performance. Should be at a level equal to or of more severity than the TBI or SCI outcome. Select one only.

Notes: Record Overall Performance for every ROI submission. Reference: Harsh, R.N.: Setting a Standard, JEMS 19(5):77, May 1994

Values

MAPPED CODE	VALUE NAME	VALUE DEFINITION
1	Good Recovery	Healthy, alert and capable of normal life. Good cerebral performance with no or only mild functional disability from non-cerebral organ system abnormalities.
2	Mild Disability	Mild cerebral disability alone or mild non-cerebral system dysfunction alone or both. Performs independent activities of daily life (dressing, traveling and food preparation). Able to resume work or school, but may have permanent or temporary physical or mental challenges.
3	Moderate Disability	Conscious. Moderate cerebral disability alone or moderate non-cerebral system dysfunction alone or both. Performs independent activities of daily life (dressing, traveling, and food preparation). May be able to work part-time in sheltered environment but disabled for competitive work.
4	Severe Disability	Conscious. Severe cerebral disability alone or severe disability from non- cerebral organ system dysfunction alone or both. Dependent on others for daily support.
5	Persisting Coma	Not conscious. Unaware of surroundings, no cognition. No verbal or psychological interaction with environment.
6	Death	Certified brain dead or dead by traditional criteria.
